

HOW MUCH CLEARANCE IS REQUIRED FOR MY SMEG FAB FRIDGE?

175mm is the minimum distance that will allow the door to fully open for access.

The appliance relies on a sound, flat, level and square base installation to function correctly.

The angle at which you personally choose to set the appliance must conform to these requirements for efficient operation of the appliance.

Dimensions less than this 175mm figure could cause the door to be damaged when opened against a wall, and will prevent shelves and fittings from being removed.

175mm is required for the FAB28, FAB30 and FAB32 models, 200mm is required for a FAB40.
